

Database Doctor assures database integrity by allowing you to remove corrupt or unwanted fields and classes in the LANDesk inventory database. Duplicate records can be removed from the LANDesk database as well. Once removed, data integrity rules can be scheduled to assure ongoing protection from data corruption. Through our powerful new database locking capability, we can now virtually guarantee an end to LANDesk database corruption.

Database Doctor also provides an important tool for upgrading or restoring your LANDesk core server. You can export ALL your key data such as inventory records, scheduler tables, and application policy information. After your upgrade or rebuild, you can easily re-import your key data. This technique of data export, server upgrade/rebuild and data re-import provides the stability of a fresh core server install with perfectly preserved data.

Visit our virtual Petting Zoo online. Instantly try and use the DD extension for LANDesk on demand.

Database Doctor 8.8™

Database Integrity

- Integrity is assured on demand or on a scheduled basis.
- Easily Delete corrupted or unwanted fields, classes, or data.
- Remove and archive duplicate records.
- Check error scan files for the root cause of corruption.

Database Protection

- Protect LANDesk inventory information by exporting it prior to database or core server rebuild.
- No need to expire the database if it becomes corrupted.
- Inventory records exported as standard scan files.
- Robust “database locking” capability prevents corruption and includes analysis tools to help determine the origin of corrupt records to the database.

Database Migration

- Migrate your LANDesk data and settings to an upgrade.
- Supports the export of all critical data and settings such as users, scopes, scripts, reports, custom groups, delivery methods, dashboards, client configurations, and more!
- After the upgrade or reinstall quickly bring back all of the settings and inventory data.

Database Lifecycle Management

- Configure periodic exports of your database for insurance against disastrous data loss.
- Archive old records to an off-line state when managed devices are retired.
- Archived records are stored as regular scan files in a secure folder. Provides savings on not consuming a LANDesk license yet it allows for record keeping purposes.
