

**Managed Planet<sup>®</sup>**  
Control Your Jungle

Data Translation Services helps you improve inventory gathering, storing, and will enhance the asset reporting data.

Data Translation services lets you customize SMS & SCCM in ways that would otherwise require you to engage the professional services of a consultant or a programmer.

With Data Translation Services your data becomes “Management Ready” business information!

## Data Translation Services<sup>™</sup>

For Microsoft<sup>®</sup> Systems Management Server 2003 & System Center Configuration Manager 2007.

DTS is an extension for System Center Configuration Manager 2007 that offers rule based data integration and mapping with other business information data pools such as the WEB, LDAP, ODBC, Barcode/RFID systems and Independent Data sources.

DTS allows you to easily bring enterprise data together to extend your knowledge and business decisions through reporting beyond the standard SCCM 2007 inventory.

Out of the box you can immediately extend the capabilities of SCCM 2007 with the DTS rules for LDAP and WEB import providing simple cost effective data integration.

DTS will automate reaching out to a OEM system manufacturer web site to provide you with the original system build lists, purchasing, and warranty information.

DTS will import and map key attributes from LDAP (Active Directory) to provide you extended intel within on managed resources for business decisions.

DTS is not just about importing. It empowers you to connect, export, and map existing asset inventory elements TO other business resources.
